

# DRYER WITH AUTO-CLEANING!

Do you know that you can auto-clean your Cera Black Jet dryer with only a button press?

Remove the rear cover by turning it slightly to the right (clockwise) and then out. Remove the metallic filter.

Let the dryer be in mode 0.

Press the two smaller buttons at the same time and hold in 4 seconds.

The dryer will start the cleaning process. It takes around 10 seconds. This will rotate the motor turbine in the opposite direction and allows deep cleaning.

Wipe the metal filter with a cloth.

Put the magnetic filter and the rear cover back on.
